Disclaimers

It's early days

Tools are changing quickly

Documentation isn't very polished

We'll work together, and get unstuck together

Make Your Choices

Protocol Ecosystem: Aries

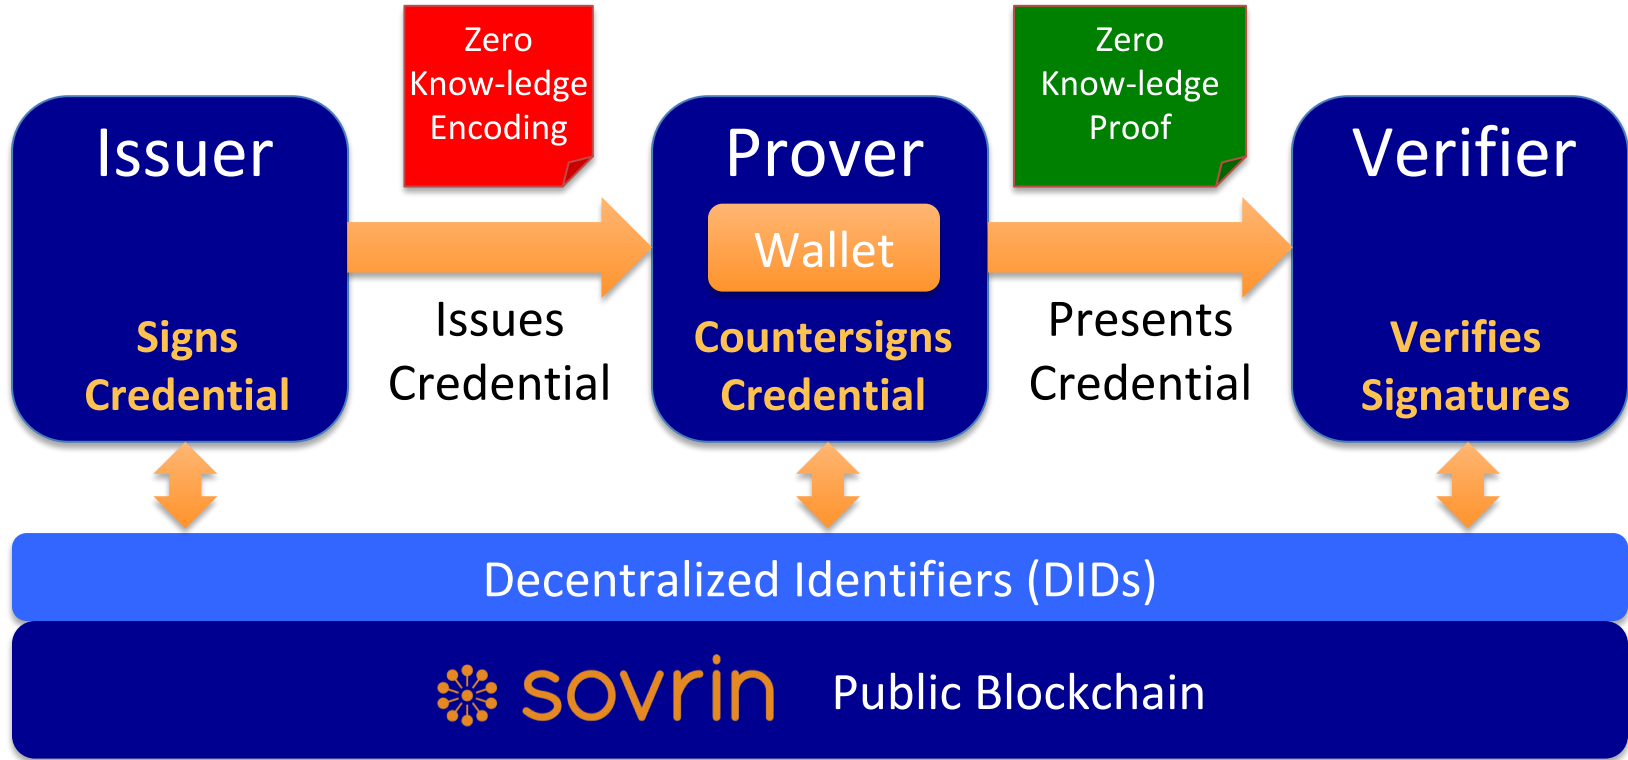

Features: ZKPs

Network: Sovrin

Language: Python

Issuer Software: ACA-Py

Sovrin Verifiable Credentials Ecosystem

Relevant Projects

HYPERLEDGER

 **THE LINUX FOUNDATION**

Setup Indy

Install Indy CLI (Debian)

(<https://github.com/hyperledger/indy-sdk/blob/master/README.md>)

Install the genesis files for Sovrin Builder Net

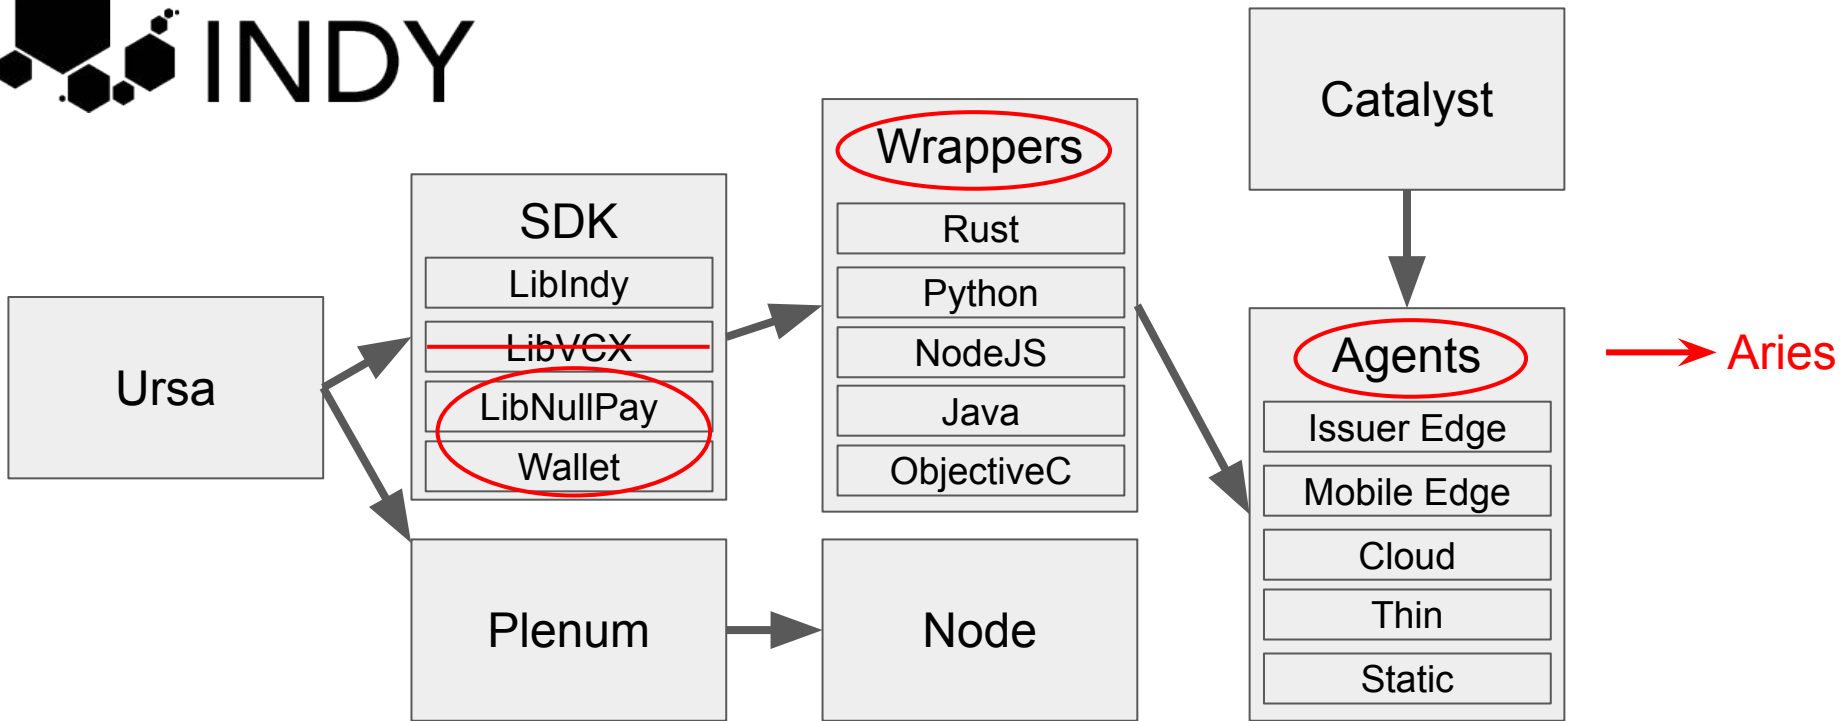

(<https://forum.sovrin.org/t/how-to-access-the-public-sovrin-network/1035>)

Generate a DID

Anchor the DID as an issuer

(<https://selfserve.sovrin.org>)

Hyperledger Indy

Setup ACA-Py

Install ACA-Py (Docker)

Get it to use your issuer DID?

Code the controller

Design a Credential

Decide on your use case

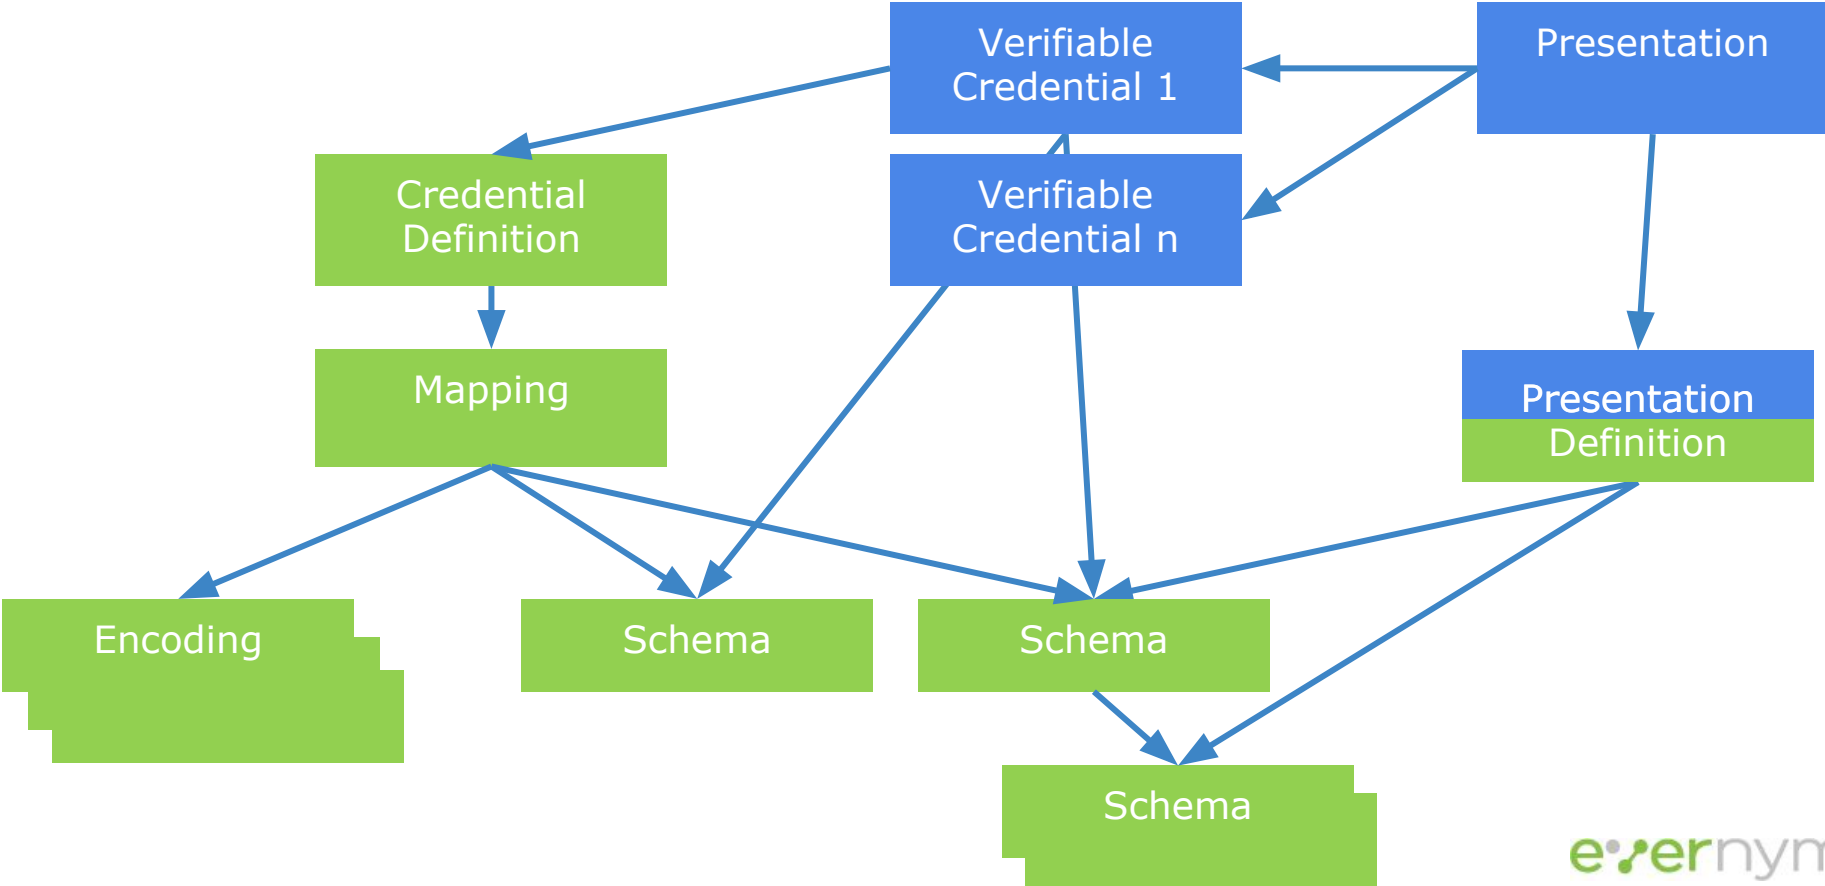

Select your attributes

Define your Schema

Define your Cred

(Future: define your presentation)

Components of a Credential

Test

Issue a credential

Verify the credential

Setup Governance

Who is going to issue the credential?

Why will the verifier trust the credential?
