HC-SIG General Meeting Guest Presentation

Mahesh Balan, CEO & Ashish Kurchania, CTO of Pravici

January 20th, 2021
1000 - 1100 Eastern

Pravici's product VeriCred, built on HL Indy/Aries addresses credential issuance and verification, such for COVID-19 vaccines. Their issuance of a "digital passport" based on Evernym's model hopes to enable trust for digital IDs. Whereas a simple digital copy of a vaccine credential can easily be edited, VeriCred is a digital VC that has been issued by a trusted authority for, and attested to its holder. Pravici will demo how to integrate with any EHR in hospitals and clinics, so the record of a vaccination can be obtained and issued to the customer who took the vaccine, with integrations to Salesforce and Epic.
