HC-SIG General Meeting Guest Presentation

John Walker, Community Architect at CCI & LFPH

February 17th, 2021
1000 - 1100 Eastern

John from the COVID-19 Credentials Initiative and Linux Foundation Public Health team is an experienced solutions architect with a background in large scale product and customer enterprise data initiatives in the tech, bio-tech, retail and publishing domains. Our guest will demonstrate and review architecture proposed for digital health pass solutions using JSON LD BBS+ signatures with ZKPs to link credentials to a link secret and why this is a preferred method for identity interoperability. We look forward to this technical conversation to explore digital health pass technology and to strive for greater medical record portability.
