A discussion for a plan of development policy toward V1 (revised)

Takuma Takeuchi

October 25, 2021

Development policy toward V1

- In our understanding, the result of the previous meeting is described as this slide:
  - c.f. https://wiki.hyperledger.org/display/cactus/2021-10-04+Meeting+Notes

- Roadmap:
  - toward V1RC1: to add new features (done)
  - toward V1: to improve the code quality of existing features
- ~~The branches are separated until V1~~
  - ~~(1) "main": the branch to improve the existing codes~~
    - ~~In principle, the latest codes will be managed except for new features.~~
  - ~~(2) "after-v1": the codes to add new features~~
    - ~~If new features are needed, they will be managed in this branch until releasing V1.~~

What is "new features"

- "Improving the existing features"
  (These existing packages are covered by releasing V1)
  - improve the existing packages
  - add new packages which merge existing packages
  - add test codes
  - add documentation

- "adding new features"
  (These packages are not covered by releasing V1)
  - add a new package directory in /packages (or /packages-***)
  - improve the above new packages
