

Iroha2 Status Updates

Egor Ivkov

Rust Developer, Iroha2 Tech Lead
ivkov@soramitsu.co.jp

Pre Release 1 - Updates

1. Script for longevity load attached and working
2. Fixed logging readability
3. Tutorial - only Swift missing
4. Investigating peers crash on longevity stand
5. Started collaborating with QA about Stress Testing

General Updates

Completed

1. WASM Runtime Integration
2. Revoke Permissions and Roles
3. Fixed logging readability
4. 1 peer special case fixes

In Progress

1. Longevity crash - investigation
2. CLI tool to inspect block storage
3. Helper lib for WASM smart contracts
4. Investigating memory usage
5. Tutorial - Swift
6. Tutorial - proofreading

Planned

1. Move permission validators into WASM
2. Time Based Triggers
3. Introduce instruction weights
4. Improvements for Iroha Python

Now I am ready for questions
Any feedback is appreciated!
