

Agenda

- 1. What is the Metaverse?
- 2. "The Metaverse", it is singular
- 3. Interoperability in the Metaverse
- 4. Markets & The Metaverse
- 5. Reference(s)
- 6. Q&A

Past & Present

- 1. Emmanuel Goldberg: Statistical Machine
- 2. Vannevar Bush: Memex (<u>As we may think</u>)
- 3. Jean Baudrillard: Hyperreality
- 4. Jean-Luc Godard: Alphaville
- 5. Neal Stephenson: Snow Crash (Metaverse, Avatar)
- 6. William Gibson: Neuromancer The Matrix
- 7. Games: Fortnite, Roblox, Minecraft, MFS ...
- 8. Planet Labs Public Benefit Corporation

Definition

Realism. To cause psychological and emotional immersion.

Ubiquity. Accessible through all existing digital devices do the user's **virtual identities** or collective persona remain intact throughout transitions?

Interoperability. (a) digital assets used in the reconstruction or rendering of virtual environments remain interchangeable across specific implementations and (b) users can move seamlessly between locations without interruption in their immersive experience?

Scalability. Does the server architecture deliver sufficient power to enable massive numbers of users to occupy the Metaverse without compromising the efficiency of the system and the experience of the users?

Dionisio et. al

Definition (Continued)

The metaverse is a future persistent and interconnected virtual environment where social and **economic** elements mirror reality. Users can interact with it and each other simultaneously across devices and immersive technologies while engaging with digital assets and property- WEF

The metaverse is an immersive and constant virtual 3D world where people interact by means of an avatar to carry out a wide range of activities. Such activities can range from leisure and gaming to professional and **commercial** interactions, financial transactions or even health interventions such as surgery. EU

A massively scaled and interoperable network of real-time rendered 3D virtual worlds that can be experienced synchronously and persistently by an effectively unlimited number of users with an individual sense of presence, and with a continuity of data, such as identity, history, entitlements, objects, communications and payments. Matthew Ball

It is Not... Neti, Neti

- 1. A "virtual world"
- 2. A "virtual space"
- 3. "Virtual reality"
- 4. A "digital and virtual economy"
- 5. A "game"
- 6. A "virtual theme park or Disneyland"
- 7. A "new app store"
- 8. A "new UGC platform"

Matthew Ball

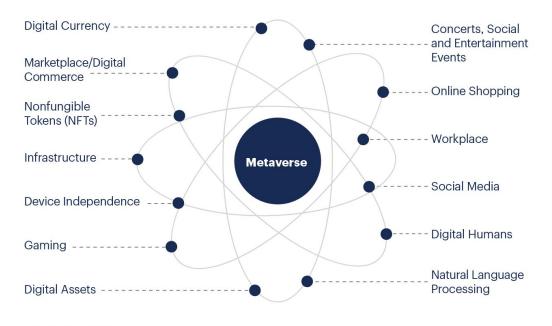

Two Visions

- AR (Augmented Reality): Microsoft- Hololens
- VR (Virtual Reality): Facebook Oculus
- Hybrid

Elements of a Metaverse

Where

- competition
- data protection
- liabilities
- financial transactions
- Cybersecurity
- Health
- accessibility and inclusiveness

Meta-Future

- Education
- AEC, Real Estate
- Industry
- Retail Lifestyle-Exercise, dating, weddings, sex-work
- Entertainment including sports, gambling and events
- Fashion
- Advertising
- Governance

The Metaverse vs A Metaverse

- Similar to "The Internet"
- As if true interoperability has arrived
- Encompasses all possible virtual worlds with seamless transitions
- Lack of a Metaverse protocol
- Standards (<u>Universal Scene Description</u>)

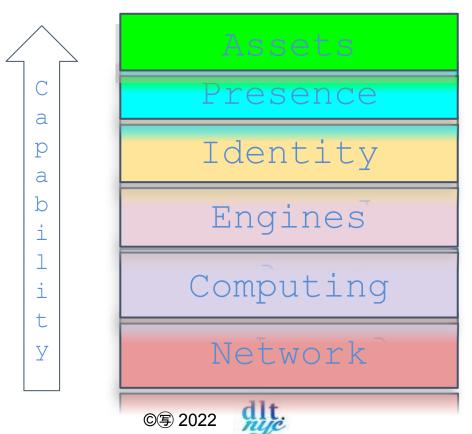

BUIDL The Metaverse

- Networks (Bandwidth and Latency)
- Devices (Primary, secondary, tertiary)
- Computing-Edge is better? Apps vs Browser
- Virtual world engines (Unreal, Unity, Helios, Steamworks, IVWP)
- Interoperability (shades of)
- Payment Rails (Blockchain) (gatekeepers)
- Identity (Blockchain)

Buidling Layers

ABCD Of The Metaverse

- AI
- Blockchain
- CryptoCurrencies
- DeFi

Value In The Metaverse

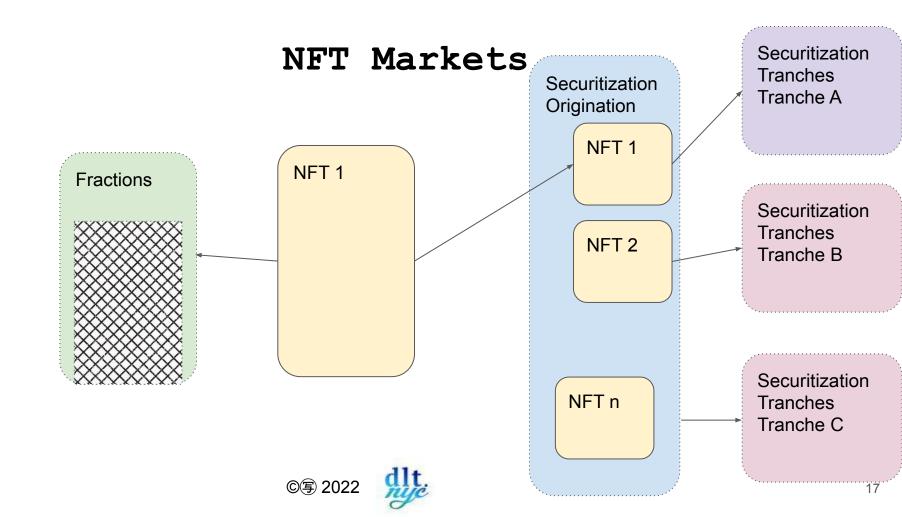

Global Summary:
Blockchain as the railroad, Big Data as the cars

Fixing transparency, traceability, AML, KYC for future advancements in data analytics (e.g., edge/quantum computing) **US** key players NFT Intellectual property mastercard Square Property Fintech coinbase J.P.Morgan Crypto Money Insurance PayPai VISA Art/Wine/Sports **NFTs** Gaming Rewards and incentives China key players Risks Insurtech Proptech B S N Blockchain-based Service Network Monopoly behavior Antitrust hindering development PINGAN JD.COM Incentives to develop E2 Alibaba Group Tencent 腾讯 Railroads Required proprietary technology Blockchain (e.g., BSN) Fragmented data **Central Bank Digital Currency** Public trust 中国人民银行 Sources: Schulte Research
