Performance and Scale Working Group

Description

Performance and scalability are two key characteristics of any platform. In terms of most of the Hyperledger projects, both will directly relate to end user satisfaction and ultimately adoption of a project. For instance, if a code base consumes too many system resources or does not complete an action in a reasonable time with respect to other solutions, it may not succeed. Similarly, if a product does not scale well (horizontally and or vertically), it may not succeed.

The purpose of the Performance and Scalability Working Group (PSWG) is to discuss, research, and identify key metrics that relate to the performance and scalability of a blockchain and blockchain related technologies.

Charter

Please see Charter for the full text of the charter.

Scope

PSWG serves as a cross project forum for architects and technologists from the Distributed Ledger Technology (DLT) community to exchange ideas and explore the performance and scalability aspects of the DLT projects. PSWG will help review incoming performance project proposals and make recommendations to the TSC. The PSWG may work with the other working groups, especially in the areas of architecture and requirements.

Meetings

All Hyperledger meetings are run covered by the following Antitrust Policy.

Meeting Agendas

All Meeting Agendas

Meeting Notes

• 2019 Meeting Notes
• 2017-2018 Meeting Notes

Communication Channels

These are the mechanisms that this working group uses to communicate.

Links to Ongoing Work

• DRAFT Metrics Definition Proposal
• DRAFT Performance Considerations in a DLT/Blockchain World
• DRAFT Fault load

Links to Completed Work

• Metrics White Paper

Links to External Resources

• Hyperledger Caliper Proposal
• BLOCKBENCH: A Framework for Analyzing Private Blockchains
• BLOCKBENCH source repository
• Bitcoin-NG: A Scalable Blockchain Protocol - A Usenix Paper
• Hyperledger Fabric: A Distributed Operating System for Permissioned Blockchains Includes some preliminary performance test results for fabric v1.0 with the Bitcoin-like (UTXO-based) “fabcoin” smart contract
• Performance Characterization of Hyperledger Fabric
• Performance Evaluation of the Quorum Blockchain Platform
• Performance Evaluation of the Quorum Blockchain Platform
• Performance Modeling and Analysis of Hyperledger Fabric - Modeled and analyzed Fabric v0.6 and V1 from performance perspective. Ph.D. Thesis. (in press)
