

Meeting Notes for 7/15/2019

- Updates
 - [Multi-Project Kanban Board](#) on Hyperledger JIRA
 - Overview of board (Mark)
 - Are we still trying to figure out what primitives we want to include? (Matt)
 - No, the primitives we want to use are already included in the RFC. (Peter)
 - Grid Product RFC and related development
 - The initial smart contract implementation has been merged, finishing up the remaining Docker file work and rust native implementation (Adeeb)
 - The rust native implementation PR is getting pretty large. Should I break a part the smart contract unit tests into its own PR. (Raph)
 - Sure, the first PR should include the native rust implementation and the unit tests for the implementation and then a follow up PR can be put up to add the smart contract unit tests. (Andi)
- Open Forum
 - I am thinking about working on the Grid Catalog RFC. How should we handle the design discussion? (Adeeb)
 - Let's create a story in JIRA to start working on defining the use case. (Mark)
