<tr>
<td>Description</td>
<td>Transact is a transaction execution platform designed to be used as a library or component when implementing distributed ledgers, including blockchains.</td>
</tr>
</tbody>
</table>

Hyperledger Transact makes writing distributed ledger software easier by providing a shared software library that handles the execution of smart contracts, including all aspects of scheduling, transaction dispatch, and state management.

Documentation

The Hyperledger Transact API documentation is available on crates.io (click "Documentation"): [https://crates.io/crates/transact](https://crates.io/crates/transact)

Project Management

Hyperledger Transact uses JIRA. There is a Kanban board.

Repositories
