Letter to the Boss

Why you should let your employees attend this Hyperledger Bootcamp!

The first Hyperledger bootcamp takes place on the 7th and 8th of March, Thursday and Friday, which are two working days. If you would like to attend but will need to ask the approval from your manager, you can consider forwarding this page or to send the letter below to your manager.

The objective of the letter below is to share what Hyperledger and Linux Foundation are, why it is relevant to your organization and industry, why we should all attend.

Dear Sir/Madam,

I'd like to attend the first global Hyperledger Bootcamp taking place 7-8 March, Thursday and Friday in Hong Kong, organised by the Linux Foundation. The Linux Foundation is a non-profit organization and this is free for anyone to attend this bootcamp.

I've researched many blockchain events - and this is THE event to attend for developers/software engineers/project managers/ who want to network with other fellow developers from around the world, learn more about the development of blockchain technologies and meet the top technical minds in the ecosystem. I hope to meet others that might face the same challenges and problems I do so that we can work together to solve technical issues now and in the future. Creating strategic partnerships at the event could be very useful in the future when we encounter new challenges.

The Linux Foundation hosts many of the most important open source projects in the world, including Linux Kernel (operating system), NodeJS (Programming language), Kubernetes (Container orchestration tools), etc. Hyperledger is the umbrella hosting all 12 blockchain and distributed ledger related projects and is the fastest growing project in the history of the Linux foundation. Currently there are over 260 members of Hyperledger including some of the largest technology companies, financial institutions, leading universities, central banks and regulators.

In the past couple of years, we have seen companies in the world exploring and implementing blockchain as a technology in different industries, including trade finance, stock settlement, supply chain, healthcare, government etc. See the references below. We strongly believe that if our organization wants to remain competitive, we need to understand those technologies at the most fundamental level, or even better if we can contribute to those open source projects, and this bootcamp is the perfect place for me to start.

Many of the maintainers and contributors of Hyperledger projects globally will come to Hong Kong and spend two days working with the participants of the bootcamp and those projects include enterprise blockchain frameworks (Hyperledger Fabric / Sawtooth), digital identity project (Hyperledger Indy), blockchain security and testing tools (Hyperledger Ursa / Hyperledger Caliper). You can read all of the projects here:

https://www.hyperledger.org/projects

You can learn more about the Hyperledger Bootcamp for details. Please let me know if you have any questions or concerns. I hope we can make this opportunity work.

Thanks,

{Your Name}
