Interoperability in Hyperledger

This is an effort to make the interoperability efforts in Hyperledger interoperable. When showing up at yet another interoperability discussion, there is often a lack of awareness of the various parallel and related efforts happening under Hyperledger on the theme of interoperability. The list below is a preliminary way of listing the efforts. We can continue to refine this by adding a little more detail against each and seeing whether they can collaborate.

1. The Architecture Working Group Interoperability paper. Meeting every two weeks.
2. The Fabric Interoperability WG- regular meetings
3. The lab project on Interoperability- blockchain-integration-framework
4. Healthcare SIG- Interoperability sub-group
5. Hyperledger Quilt
