Driving growth of Hyperledger Labs

Recruiting projects to join labs

- Apache has more labs
  - List here of 40 labs
  - Should we consider adopting some of these practices? In particular, the lifecycle:
    - A lab can have four states:

      - Active
      - Idle
      - Promoted
      - Completed
- Perhaps Apache Podlings are a better fit?
  - This page on status may be something to emulate
- For example: https://github.com/sivachokkapu/revive-cc
  - GitHub user is not a member of Labs or Hyperledger
  - Needs relicensed

Recruiting people to become stewards

- Are stewards a bottleneck?
- Does Labs need more?
