

2021 Q3 Hyperledger Caliper

Project Health

- Two maintainers and one significant contributor (soon to be maintainer) work on the project.
- An ongoing mentorship project targets a new feature that will lower the entry barrier for defining workloads.
- Rocket.chat activity is mainly about the configuration and setup of Caliper.

Required Information

1. [Have you switched from master to main in all your repos?](#) Yes
2. [Have you implemented the Common Repository Structure in all your repos?](#) Partially

Questions/Issues for the TSC

No issues at this time.

Releases

v0.4.x patch releases.

Overall Activity in the Past Quarter

- Identifying limitations that could hinder the implementation of complex, large-scale benchmarks.
- HL Mentorship contributions: gradually implementing parts of a built-in, declarative workload module.

Current Plans

- Finish, integrate, and document the HL Mentorship project. Reach out to the community for feedback.
- Implement the common repo requirements.
- Migrate the CI/CD pipeline from Azure to GitHub Actions.
- Make the orchestration, communication, and round execution of worker services more flexible to allow for more complex benchmark implementations.

Maintainer Diversity

Attila Klenik: Maintainer

Nick Lincoln: Maintainer

Dave Kelsey: Contributor (soon to be maintainer)

Contributor Diversity

Primary activity from IBM contributions, smaller PRs being raised by the community.
