

Install multiple discord clients

If you have a pre-existing Discord account and don't want to use it with Hyperledger Discord, installing one of the test clients or using the browser client will help.

Step-by-step guide

1. Visit the [Discord test client webpage](#)
2. Install one of the test clients - Canary or PTB.
3. These use distinct credential stores, so you will be able to log in and create a [Hyperledger-only](#) account.
4. If you are a developer, [please link github to your discord profile](#).
